

OFFICIAL ABSTRACT and CERTIFICATION

Relating Major Depressive Disorder (MDD) to circadian signaling in *Drosophila melanogaster*

Mir Zayid Alam, Taylor Fox

Manhasset High School, Manhasset, NY, USA

In 2019, over 3.2 million adolescents aged 12-17 experienced symptoms of Major Depressive Disorder (MDD), and 73% of adolescents who experienced MDD did not get enough sleep per night. Depression, which is characterized by lower-than-normal levels of serotonin, can be modeled in *Drosophila* via chronic vibrational stress (VS). The purpose of this experiment was to elucidate the relationship between circadian oscillator modification and the severity of symptoms of MDD in the model *Drosophila melanogaster*. The *Drosophila* Activity Monitor and custom Python code were used to measure sleep. VS caused arrhythmic sleep architecture in w1118 controls. During both the daytime and nighttime, fumin (insomnia-like) mutants had higher numbers of sleep bouts than the w1118 flies, indicating that the fumin mutants experienced less sleep consolidation because their arousal is characterized by enhanced alertness, due to the fact that they have a higher amount of extracellular dopamine and a decreased arousal threshold. VS exposure increased the number of sleep bouts because it caused more fragmented sleep, reducing sleep consolidation in the flies via the inhibition of 5-HT release to the 5-HT-1A receptors in the lobes of the MBs. Flies with elevated tryptophan hydroxylase (Trh) (generated by crossing UAS-Trh; Elav-Gal4) alleviated arrhythmicity induced by VS. Trh is rate-limiting in serotonin synthesis, so elevating it was posited to increase brain serotonin, relieving the effects of VS. Thus, VS-induced sleep irregularity was enhanced with insomnia-like predisposition and alleviated with increased brain serotonin.

1. As a part of this research project, the student directly handled, manipulated, or interacted with (check ALL that apply):

☐ human participants

☐ potentially hazardous biological agents

☐ vertebrate animals

☐ microorganisms

☐ rDNA

☐ tissue

2. I/we worked or used equipment in a regulated research institution or industrial setting: ☐ Yes ☒ No

3. This project is a continuation of previous research. ☐ Yes ☒ No

4. My display board includes non-published photographs/visual depictions of humans (other than myself): ☐ Yes ☒ No

5. This abstract describes only procedures performed by me/us, reflects my/our own independent research, and represents one year's work only: ☒ Yes ☐ No

6. I/we hereby certify that the abstract and responses to the above statements are correct and properly reflect my/our own work. ☒ Yes ☐ No

This stamp or embossed seal attests that this project is in compliance with all federal and state laws and regulations and that all appropriate reviews and approvals have been obtained including the final clearance by the Scientific Review Committee.
