

OFFICIAL ABSTRACT and CERTIFICATION

Implementation of Novel Sector Weight and Google Trends Data Objectives using MOEA/D Curtails Systematic Risk for Quintessential Investors

Abishek Ravindran

W Tresper Clarke High School, Westbury, NY, United States

The Markowitz Mean-Variance model provides a computational framework for developing optimized portfolios but fails to account for the risk associated with human behavior. This study proposes an extended Markowitz Mean-Variance model that incorporates sector-weights and Google Trends data as objectives to bolster the model's applicability to retail investors. As the complexity of the problem renders an exact solution unattainable, a multi-objective evolutionary algorithm based on decomposition (MOEA-D) was implemented for its efficacy in creating a diverse population of solutions in a single run.

The study's purpose was two-fold. First, the implementation of MOEA-D was optimized through parameter fine-tuning with 36 combinations of parameters. Next, the efficacy of the supplementary objectives was tested discretely through two experimental groups and one control group: Google Trends, sector-weights, and a standard bi-objective model, respectively. The following parameters were elucidated as effective for the specificities of the problem: population = 230, mutation rate = .03, crossover rate = .6, and number of iterations = 120,000. The behavioral objective showed promise in developing portfolios that minimized losses during the depth of the financial crisis with an out-of-sample loss of -0.00043 as opposed to the losses of -0.00051 for the bi-objective model, while the model with sector-weights exhibited the lowest variance of 0.000502675 in the out-of-sample data set. While frequent rebalancing would be necessary to ensure favorable results due to greater variance over the out-of-sample data set, Google Trends data exhibits great promise as a supplementary objective for portfolio optimization, warranting further analysis.

- As a part of this research project, the student directly handled, manipulated, or interacted with (check ALL that apply):

☐ human participants
 ☐ potentially hazardous biological agents
 ☐ vertebrate animals
 ☐ microorganisms
 ☐ rDNA
 ☐ tissue
- I/we worked or used equipment in a regulated research institution or industrial setting: ☒ Yes ☐ No
- This project is a continuation of previous research. ☒ Yes ☐ No
- My display board includes non-published photographs/visual depictions of humans (other than myself): ☐ Yes ☒ No
- This abstract describes only procedures performed by me/us, reflects my/our own independent research, and represents one year's work only: ☒ Yes ☐ No
- I/we hereby certify that the abstract and responses to the above statements are correct and properly reflect my/our own work. ☒ Yes ☐ No

This stamp or embossed seal attests that this project is in compliance with all federal and state laws and regulations and that all appropriate reviews and approvals have been obtained including the final clearance by the Scientific Review Committee.
